**Examiner's Amendment**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this amendment was given in a telephone interview with Nathan Weber on 11/2/07.

In the Claims:

In claim 24, all occurrences of "location" have been changed to "location information".

**Reasons for Allowance**

2. Regarding claims 1, 12, 18, 22, and 23, Wenzel (2003/0073439) teaches a receiving unit receiving, from an active system routing device, a first registration request containing a first address (fig. 2 box 204, registration request IP address primary HA, [0032]) and a second registration request containing a second address held by a mobile node (fig. 2 box 210, 212, registration request secondary HA, [0033]);

Art Unit: 2619

Wenzel teaches a storage unit / subscriber unit, storing the first address and the second address in a way that maps the first and second addresses to each other (subscriber unit, primary home agent, secondary home agents, [0012]);

Wenzel teaches a general data forwarding unit forwarding general data to the second address according to said storage unit (single secondary home agent not overloaded, [0012]);

Wenzel teaches a monitoring unit monitoring a status of said active system routing device (should the primary home agent fail, [0012]);

Wenzel teaches a switchover unit switching over said standby system routing device to an active system if said monitoring unit judges that a fault occurs in said active system routing device (primary home agent fails, single secondary home agent not overloaded, [0012]);

Although Wenzel teaches a first registration request containing a first address and a second registration request containing a second address held by a mobile node, the reference does not teach a registration request containing a first address and a second address held by a mobile node. In addition, although

Art Unit: 2619

Wenzel teaches a storage unit storing the first address and the second address in a way that maps the first and second addresses to each other, the reference does not teach a storage unit storing the first address and the second address in a way that maps the first and second addresses to each other on the basis of the registration request received. Furthermore, the reference does not teach a transmission request unit sending a transmission request for transmitting the registration request to the second address stored on the storage unit when said switchover unit executes the switchover.

Regarding claim 24, nothing in the prior art of record teaches or fairly suggest, judging in accordance with a value of priority level corresponding to the location registration message whether the location registration message is forwarded to a standby system home agent (HA), in combination with the other limitations of the claim.

### **Conclusion**

3. Any comments considered necessary by the applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue
